**REPORT:**

The department organized MEET THE CEO programme for MBA First year students on 03-11-2018 by inviting Dasri.Rmakrishna garu MD, Efftronics India Ltd. Science is not being properly understood and applied in India. We need to introspect what value we can add to existing system. How best we use technology to create value. India and China were leading countries in the earlier centuries but dropped due to industrial revolution. The reason is simple, we both were not able to adapt to changing conditions. India is struggling to cope up with fourth revolution. Technology wise, India may be five years behind advanced nations. But India is way behind the developed nation ‘sin terms of socio-cultural development. India needs changes in education. Changing syllabus with a practical dimension is the need of the day. Unless we apply what we learned it could not be called as education. Learn to take data driven decision than intuitive decision in the digitalized world.
