

**Guest Lecture
On
Chemistry in Biology
24th October, 2018.**

PG Department of Chemistry organised a Guest lecture on Chemistry in Biology by Dr. N. Madhusudhana Rao, CEO, Atal Incubation Centre, Centre for Cellular and Molecular Biology, Hyderabad on 24th October, 2018. In his lecture he explained that how does chemistry related to biology and Biological processes of living organisms depend upon the interactions of the atoms, molecules and compounds that make up living tissues and the environment in which life takes place. He also explained that Biology and chemistry do connect in multiple ways, but the main one is, Matter. Matter makes up everything in this world, from environment to elements on the periodic table. Matter and atoms, particles are in everything we use.
