Blood group testing and awareness programme from 22/07/2019 to 26/7/2019

Organised by Department of ZOOLOGY

A five day long free Blood group testing and awareness camp was organised by Department of Zoology **from 22/07/2019 to 26/7/2019** in alliance with College Red ribbon Club to determine the Blood Groups of first year degree and post graduate students of our college. The test is necessary for blood transfusion or to donate blood. Not all blood types are compatible, so it is important to all students to know their blood group and understand the importance of voluntary blood donation. Mass blood grouping camp was conducted by trained B.Sc. III year CBZ students of our college, at which more than 1050 students were tested to know their blood group which is documented to help the needy. The students will also enter their blood groups in their identity card which will be helpful for them during medical emergency.

Dr. V. Narayana Rao Principal of our college addressed the students about the importance of knowing their Blood Groups and urged the students to serve the community as a blood donor in blood donation camps. Dr. V. Subhashini HOD Zoology, of this college, trained the Biology students in conducting the Blood Grouping test and advised that the students should transform their classroom knowledge to serve the community.

The College Red Ribbon Club Convenor Dr. M.Srinivasa Rao, Members Sri. N.SambaSiva Rao, Sri. T.Vijay Babu, Sri. D. Pavan and Zoology faculty members Dr. A. Samba Naik, Sri. T. Samba Siva Rao and Dr. G. Sakuntala took part in the activity for making this programme a grand success.

Procedure for blood grouping and Rhesus factor:

AIMS AND OBJECTIVE

- The aim of this study was to evaluate blood group distribution among male and female students.
- To identify the rare groups like AB^{-ve} A^{-ve} B^{-ve} and O^{-ve}
- To prepare a data base of blood groups of students.
- To estimate the BMI, a useful measure of overweight and obesity

DATA COLLECTION AND PROJECT DESIGN

ABO and Rh blood group system remains so far the most significant in blood transfusion. The magnificent discovery of ABO blood group system is credited to Austrian scientist Karl Landsteiner in 19001.

The study was done during July 2019 in Department of Zoology, KBN College Vijayawada. A pre-designed questionnaire was used to collect the information from the students regarding their age, gender, caste, class, roll number, Adhar number, E-mail Id and Phone number. Blood grouping and BMI is done by the students of III B.Sc. CBZ students.

Materials and methods: The available data of 1050 students of 1st year of Degree and PG students courses was analysed in every required aspects i.e. sex, age, ABO and Rh blood groups and BMI. The standard antisera (A, B, & D) were used to

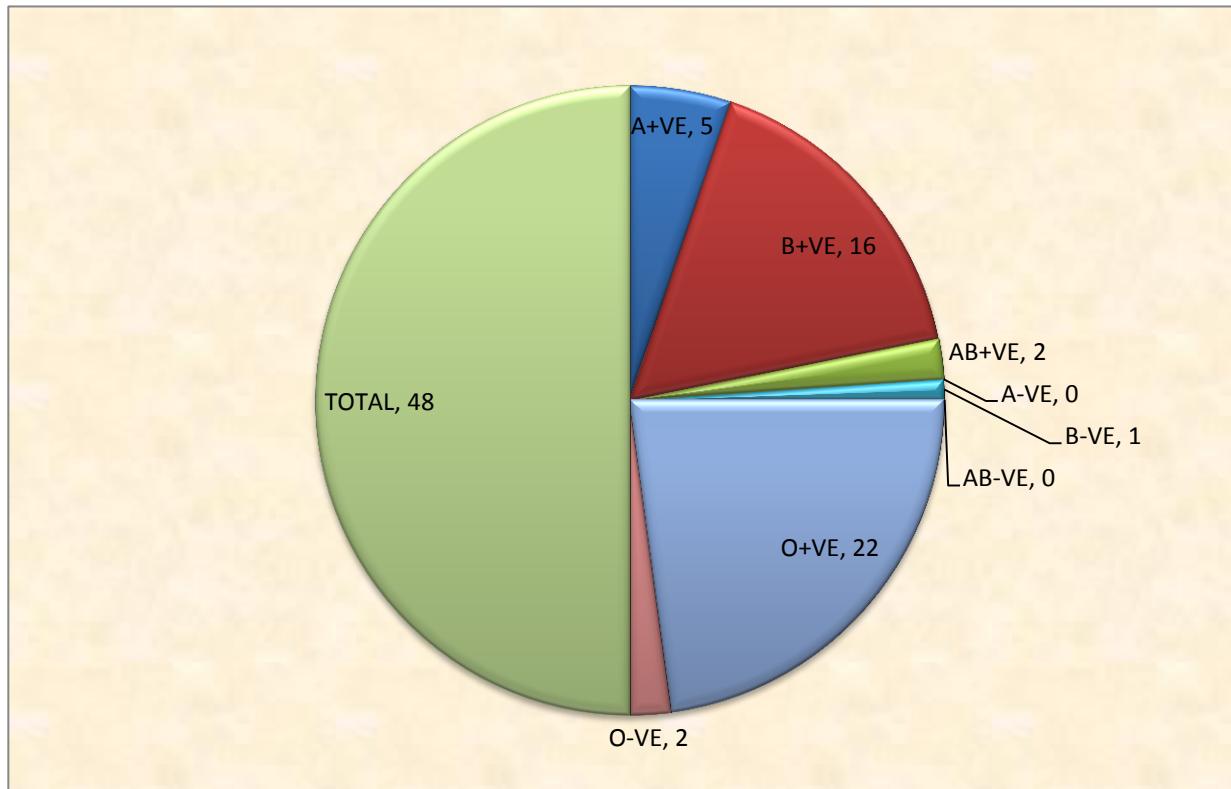

determine the blood group, and normal methods of dividing a person's weight by their height squared were used to find out Body Mass Index respectively. Finally, all the parameters were compared and analysed statistically.

Results: The available data of 1050 students was analysed. The age group was homogeneous in our study ie; from 17–20 years. It was found that the predominant blood group in current study was blood group **O +ve** followed by **B+ve** then **A +ve** and least common AB. Blood group O (44%) was the most common blood group in both genders followed by B (30%), A (19%), and AB (7%).
